

Design justice

An approach that examines how design distributes benefits and harms among groups of people and that puts the communities who live with the consequences at the center, to design with them.

In Spanish

Justicia de diseño

Origin

Design Justice Network (2016); Costanza-Chock (2020)

What it's for

It helps you see that a design can work well for most people and, at the same time, leave out or harm certain groups.

Principles

Center those who live with the consequences

Their voices guide the process; they aren't just consulted.

Impact over intention

What matters is what the design does in the community, not what was intended.

The designer as facilitator

Rather than an expert who decides, they accompany the community.

How it's done

Ask who wins and who loses with the design.

Design with the people most affected, from the start.

Share control of the process and the outcomes.

Applications in design

 When to use it When designing public services, technology or spaces that affect different groups differently.	 Avoid Inviting the community only to validate at the end what has already been decided.	 Don't fall for it Also acknowledge your own position and what you can't see from it.
